P532504

AIR FILTER, RADIALSEAL SAFETY

Why choose Donaldson Safety Filters?

Safety filters have a dual purpose: they duplicate the functions of the pre-filter and protect the engine during pre-filter maintenance.

- Take over the functions of the pre-filter in case of damage or improper installation.
- Keep contaminants out of the clean side of the air intake system during pre-filter maintenance.
- Will quickly become clogged with contaminants if the pre-filter passes them, alerting operators to a problem.
- It is recommended that the safety filters be replaced every third pre-filter change, provided that the pre-filter has not failed.

Attributes (characteristics)

Outside diameter	150.9 mm (5.94 inches)
Inner diameter	109.6 mm (4.31 inches)
Length	391.4 mm (15.41 inches)
Performance test standard	ISO 5011
Group	FRG
Main application area	CATERPILLAR 612504
Type of	safety
Construction type	radialseal
Brand	Sealing technology
filler type	safety
